

ICCT-MIS Capstone — List of Revisions

1. Abstract — Fix Typos

Current: > “on manual request letters or faculty, ID presentation”

Fix: Remove the comma > “on manual request letters or faculty ID presentation”

Current: > “Th e expected contribution”

Fix: Remove extra space > “The expected contribution”

2. Section I.C Objectives — Add Clarity

Current (#5): > “Generate automated reports on borrowing frequency, overdue returns, and resource utilization.”

Change to (so it matches what’s actually built): > “Design a reporting module for generating reports on borrowing frequency, overdue returns, and resource utilization — to be implemented in the next phase.”

This way, honest kayo na proposed/designed lang siya, hindi pa implemented.

3. Section II (Related Works) — Fix References

Current: Puro “_ *et al.*” sa [6]-[10] at [16]-[20]

Hanapin niyo yung actual names ng authors para sa mga to: - [6] The Features of Quick Response (QR) Code as an Attendance Monitoring System... - [7] Development of Employee Attendance and Management System... - [8] Study on the Impact and Effectiveness of QR Code and SMS-Based Attendance... - [9] Student ID Validation Monitoring System - [10] Assessing the Impact of QR Code Scanning... - [16]-[20] Same issue

Format dapat IEEE: > [6] J. Dela Cruz, M. Santos, at R. Reyes, “Title of Paper,” *Journal/Conference Name*, taon.

Kung hindi mahanap names, at least ilagay yung unang author: > [6] J. Dela Cruz *et al.*, “Title...”

Pati fix: - [2] Masalha and Hirzallah — walang publication year. Add: (2014) - [12] Patel & Patel — walang journal/conference info - [13] Sobrang haba at magulo — gawing concise IEEE format

4. Figures — Improvements

Fig. 1 — Iterative SDLC

Problem: Walang labels sa arrows kung anong phase. **Add sa arrows:** Planning → Analysis → Design → Implementation → Testing → Deployment **Arrow dapat:** May loop pabalik (kasi iterative nga)

Fig. 3 — System Flowchart

Problem 1: “Not Returned” path — walang indication kung ano mangyayari after **Fix:** Add “Send notification to admin” box after “Not Returned” or loop back to monitoring

Problem 2: “Due Date Notifications” — hindi clear kung kelan nagti-trigger **Fix:** Add decision diamond: “Is item due?” → Yes → “Send notification” → No → loop back

5. Section I.E (Limitations) — Add New Limitation

Current: Wala pang mention ng delivery location tracking

Add after “Customization”: > • **Delivery Location Tracking:** The system requires faculty to manually input their room or delivery location, which may result in incomplete or inaccurate entries if not properly filled out.

This covers yung bagong Room feature.

6. General Grammar Check

Sa buong document: - Capitalize consistently: “QR Code” (both words capitalized) vs “QR code” — pick one and stick with it - “Web-based” — consistent hyphenation - I-check niyo yung spaces between paragraphs — may ibang section na sobrang sikip
